

# Skills Assessment — AI-First Web Developer / Designer

Brief + Worksheet | JRNY Digital

---

## Before you start — read this part

Hey, and thanks for getting this far with us.

This isn't a trick test, and there are no hidden "gotchas." We want to see how you think, how you work, and how you use AI to move fast without losing taste. We'd rather see sharp judgement on a focused build than a sprawling site that took you a week.

A quick bit of real talk on how we work and what we're looking for:

- **We're an AI-first agency.** Use any AI tools you like — Claude, v0, Lovable, Bolt, Cursor, Figma AI, Webflow AI, whatever's in your kit. We're not testing whether you can hand-code from scratch. We're testing whether you can direct AI to produce something genuinely good, and whether you know the difference between good and generic.
- **Speed is a strength, not a shortcut.** One of our values is *Move With Speed*. We want to see you ship.
- **Taste is the hard part.** AI will happily generate something mediocre. The value you bring is knowing what to keep, what to fix, and why.
- **Show your thinking.** Half of this assessment is the Loom video. We care as much about *how* you got there as the final pixels.

We've timeboxed this so it respects your time (more on that below). Don't over-invest — we'd genuinely rather you stop at "good and explained well" than grind to "perfect."

---

## Part 1 — The Brief

### The client (fictional)

**Brightwater Family Law** — a boutique family law firm based in Brisbane, also servicing the Gold Coast.

- **Size:** Four lawyers, led by a principal solicitor with 18 years' experience.
- **Practice areas:** Divorce & separation, property settlements, parenting and custody arrangements, and mediation.
- **Who they serve:** People going through one of the hardest periods of their lives. Most are first-time legal clients — stressed, anxious, often researching late at night, and comparing two or three firms before they reach out. They're not shopping on price; they're shopping on *trust* and *who feels like they'll actually look after me*.
- **The problem:** Their current website is dated, generic, and built like a brochure. It looks like every other law firm. It doesn't communicate warmth or expertise, there's no obvious next step, and it bounces hard on mobile — which is where most of their traffic is.

## The objective

Build a website that does three things:

1. **Builds instant trust.** Calm, human, premium-but-approachable. Not aggressive, not ambulance-chaser, not cold and corporate.
2. **Communicates expertise clearly.** A stressed person should understand what Brightwater does and why they're in safe hands within seconds.
3. **Drives the conversion.** The primary goal is a **booked free 20-minute consultation**. Everything should make that path obvious and low-friction.

## Brand feel to aim for

Calm. Trustworthy. Modern. Human. Premium without being stuffy. Think "the firm a friend would recommend," not "the firm with the biggest billboard."

You have creative freedom on the visual direction — colour palette, type, layout, imagery are yours to decide. We want to see *your* taste applied to *their* problem.

**Note:** This is a fictional client, so don't worry about real branding or assets. Invent what you need (logo, name treatment, placeholder testimonials, team bios). Just keep it believable.

## Scope

Keep it focused. We suggest **one of these two options** — pick whichever lets you show your strengths best:

- **Option A — Focused multi-page site:** Homepage + 2–3 key supporting pages (e.g. a practice-area page, an about/team page, a contact/booking page).
- **Option B — High-converting single-page site:** One strong long-form page that takes a visitor from "I'm stressed and researching" to "I've booked a consult."

Either is a complete answer. Choose based on what you want to show us.

## Constraints & ground rules

- **Timebox:** Aim for roughly **4–6 hours of actual build time**. This is a guide, not a stopwatch — but please don't sink 20 hours into it. If you run out of time, leave it unfinished and tell us what you'd have done next. That's a perfectly good answer.
- **Tools:** Any AI tools welcome. Tell us what you used (in the worksheet).
- **Deliverable format:** A live, viewable link is ideal (deployed, or a preview link from your build tool). A recorded walkthrough of a local build is acceptable if a link isn't practical.
- **Mobile matters.** Most of Brightwater's audience is on a phone. We'll look at it on one.
- **No real client work, no plagiarism.** Don't lift a competitor's site wholesale. Inspiration is fine; copying isn't.

## What you'll hand back

1. **The website** — a link (or recorded walkthrough if no link is possible).
  2. **A Loom video** — walking us through your process and creative thinking (5–10 minutes is plenty; see the checklist in Part 3).
  3. **This worksheet** — filled in.
- 

## Part 2 — The Worksheet

Fill this in as you go (or right after). Keep answers tight — bullet points are fine. This is what we'll read alongside your build and Loom.

### A. Your read on the brief

*Before you opened a single tool — what did you decide mattered most?*

- Who exactly is the visitor, and what's their emotional state when they land?

*Your answer:*

- What's the single most important thing this site has to do?

*Your answer:*

- Option A or Option B — and why?

*Your answer:*

- Anything you deliberately chose *not* to include, and why?

*Your answer:*

## **B. Tool stack**

*What did you use, and why that combination?*

| Tool | What you used it for | Why this one |
|------|----------------------|--------------|
|      |                      |              |
|      |                      |              |

- If you could only keep one tool from your stack, which and why?

*Your answer:*

## **C. Creative process & key decisions**

*Walk us through the build. Three or four key decisions is plenty.*

- Visual direction (palette, type, mood) — what you chose and why it fits Brightwater:

*Your answer:*

- A decision you made that you think most people would get wrong:

*Your answer:*

- A moment AI gave you something good — what was it?

*Your answer:*

- A moment AI gave you something bad or generic, and how you fixed or overrode it:

*Your answer:*

## **D. Conversion thinking**

*This is a direct-response agency — show us you think about outcomes, not just aesthetics.*

- How does the page move someone toward booking a consult? Walk the path.

*Your answer:*

- What's your primary CTA, and where does it appear?

*Your answer:*

- What objection or hesitation did you design *around* (e.g. cost, fear, "is this firm right for me")?

*Your answer:*

## **E. Time & honesty**

- Roughly how long did you spend, end to end?

*Your answer:*

- What's unfinished or rough, and what would you do next with more time?

*Your answer:*

- One thing you're proud of:

*Your answer:*

## **F. Your Loom video**

Record a 5–10 minute walkthrough. You don't need a script — talk us through it naturally, like you're showing a teammate. Please cover:

- ☐ A quick tour of the finished site (desktop + mobile)
- ☐ Your read on the brief and the core decision behind your approach
- ☐ The tools you used and how you orchestrated them
- ☐ One or two decisions you're proud of, and *why*
- ☐ One thing AI got wrong and how you handled it
- ☐ What you'd do next if this were a real client and you had another day

**Loom link:**

*Paste here:*

**Live site / preview link:**

*Paste here:*

---

## **Submitting**

Send us back the three things — site link, Loom link, and this completed worksheet — to **erika@jrnydigital.com.au**.

Any questions before you start, just ask. We'd rather you check than guess.

Good luck — we're genuinely looking forward to seeing how you think.

— *The JRNY Digital team*
